Rolex Watch customization:

This is my very recent project for the Rolex watch . This was a group project and my part was configure page and checkout page . In the configure page User can configure Rolex watches . The watch has 3 parts dials, bezels , straps and extra rubber straps. Here user can use different kinds of these elements to configure a watch and can see the live price while changing any element. He can also choose the size of the watch .There are two sizes available 36 and 41 . Lastly users can also choose additional rubber straps and for each straps they need to pay an additional £500 . In the checkout page users can see the summary of their customized watch and number of additional rubber straps and total price .

Technologies: ReactJs , CSS, TailwindCSS , React-slick, Slick-carousel .
